REPORT

TO THE

HONORABLE JOHN GREELEY JENKINS, M.P.,

PREMIER AND CHIEF SECRETARY.

South Australia: Chief Secretary's Office, Adelaide, November 30th, 1901.

Sir—In presenting the Agricultural and Live Stock Statistics for the year ended March 31st, 1901, I have the honor to submit the following report, embodying the principal results obtainable from the information collected, together with comparative statements illustrating the condition of the chief producing interests during the past decade as well as in the period under review—more important as covering the interval between the decennial censuses of 1891 and 1901—besides enabling comparisons to be drawn, based upon the population of the several districts, as shown at the respective censuses dating back forty years.

The day for collecting the census of 1901 was fixed for the 31st March, the same as that of the rest of the British Empire, simultaneous enumeration having existed since 1881.

Under agreement come to at a conference of statists, held in 1861, uniformity was secured in the method of compiling information acquired throughout the Australian colonies as to agriculture and kindred subjects; which system practically exists at the present time. Based on the same lines as those of the United Kingdom, Australian statistics are incorporated with those of the Board of Trade, hence having world-wide publicity.

Ordinarily the Agricultural and Live Stock returns are distributed in January, and the collection is finished in March, but in census years it is necessary to defer the work so as to be taken at the same time as the census, March 31st, 1901, it being evident that more complete information can be obtained through the medium of some collectors with smaller areas to traverse, and who were required to visit, in the performance of census duties, every holding, amounting in the aggregate to 75,854, as compared with 63,887 at the previous enumeration of the people. The forms of Agricultural and Live Stock were distributed and collected with the census papers.

The number of districts was 800, and 520 persons were employed, of whom forty-four were members of the mounted police force, who, under the supervision of their inspectors, carried out the duties in the outer districts, and whose arduous work was performed with much zeal and ability under the difficulties of travelling over hundreds of square miles with but few habitations, and the scarcity, in places, of natural feed and water for their horses. The country traversed extended over an area of 300,000 square miles, from MacDonnell Bay in the south, to beyond Alice Springs to the centre of the continent, and between the boundaries of Western Australia, and on the east the boundaries of Victoria, New South Wales, and Queensland.

The duties pertaining to the Census and Agricultural and Live Stock statistics in the Northern Territory were undertaken by the local mounted constables under the direction of the Government Resident. Although very sparsely peopled, the area to be accounted for covered no less than 523,620 square miles.

Altogether about 75,000 returns were collected from as many occupiers (the live stock in towns being included). The work of compiling, tabulating, and preparing the information for printing has been proportionately heavy. Every effort was made to afford early information to the public of the result of the wheat and hay harvests immediately after the last forms were received, the particulars from distant localities being furnished by telegraph where necessary. A preliminary summary showing the area under wheat and produce of grain or hay, the average yield and rainfall for each division and county was published on June 13th, and supplemented on August 31st, with complete tables, giving the area and produce of each description of crop and of live stock throughout the State; comparisons with the previous season, showing the increase or decrease under each heading, together with such other particulars, as exhibit the position of Agricultural, Horticultural, Viticultural, and Pastoral production.

It should be generally known that persons employed on the collection of agricultural statistics are forbidden to divulge any information they may receive in performing their duty. The individual returns are held to be strictly confidential, as printed on the face of the forms distributed, and aggregate results only are made public; they are destroyed after the particulars have been extracted by the officers of the department. Under no circumstances is the information used for any other purpose whatever. The

The wide scope of inquiry will be better understood by a recapitulation of the subject matter dealt with, the principal of which come under the headings following, viz. :—(1) Territorial Divisions; (2) Area and Occupation; (3) Enclosure of Land; (4) Rainfall; (5) Area under Cultivation; (6) Agriculture; (7) Horticulture; (8) Viticulture; (9) Grazing and Dairying; and (10) Pastoral Pursuits.

For census and statistical purposes the State is divided into conveniently-sized districts, in such a manner as to enable the compiler to exhibit the result in each subject of inquiry for the whole State, and in its several territorial divisions, whether county, hundred, electoral district, corporation, or district council.

Each collector is supplied with a plan showing the numbers of sections of land sold or unsold, numbers and areas of Crown leases, homestead blocks, village settlements, reserves of all kinds, railways, roads, &c.; in fact, the fullest particulars necessary to ensure completeness of work within the boundaries of the district to which he has been appointed.

Under the head "Area and Occupation" will be found a statement of the total area of the State and of each county, the acreage alienated from the Crown, together with the area remaining unalienated, and of the system under which the public lands are now occupied.

The general term "Cultivation" comprises particulars relating to the distribution of tillage under the several principal crops, which include wheat, oats, barley, peas, cereal hay, potatoes, green fodder, and permanent sown grasses.

Under the headings "Horticulture" and "Viticulture" are given all available information respecting the area of vineyards, orchards, and gardens, and the various products thereof.

The pluvial statistics show records of the average rainfall per annum, and in each month, over a series of years, within the limits of agricultural settlement, the mean yearly fall in each of five divisions, and for the whole State, as well as at the Adelaide Observatory.

Grazing and dairying are represented by returns showing the number and description of live stock on farms, such as horses (working or other), cattle (distinguishing milch cows), sheep and lambs, pigs, goats, and poultry of all kinds; also the quantity of butter and cheese made in each district.

The statements relating to pastoral pursuits show the number of horses, cattle, and sheep running on Crown lands in the outer districts under the pasturage laws and regulations. Returns are also given of the number of live stock imported and exported, also of the prices ruling for wool and fat stock during a period of years.

Opportunity is also availed of to ascertain the development of industries, among others those more directly the outcome of primary production. In this category come flour mills, butter, cheese, and bacon factories, creameries, tanneries, and fellmongeries, soap and candle works, wine-making and fruit-preserving establishments, distilleries, eucalyptus and olive oil factories, bark mills, saw mills, salt works, cement works and potteries, agricultural implement works, chaffcutting works, wagon-builders, cooperages, and many others, particulars being given as to number of persons, machinery, and the motive power employed.

TERRITORIAL DIVISIONS.

South Australia, properly so called, extends over an area of 380,070 square miles, or 243,244,800 acres, and—including the Northern Territory, lying north of the 26th parallel of south latitude, covering 523,260 square miles, or 335,116,800 acres—the aggregate area is 903,690 square miles, or 578,361,600 acres.

The State is bounded on the south by the South Pacific, on the north by the Indian Ocean and Gulf of Carpentaria, on the east by the colonies of Victoria, New South Wales, and Queensland, and on the west by Western Australia. Situated between the 11th and 38th parallels of south latitude and 129th to 141st meridians of east longitude, its greatest length from south to north is 1,850 miles, and breadth from east to west 650 miles, having a seaboard of over 2,000 miles.

In my report on the Agricultural and Live Stock Statistics for 1890-91 the extent of country embraced within each of the five groups into which the province is sub-divided for statistical purposes was indicated, and their several boundaries delineated. Also, in a general manner, the configuration of the country, the adaptability of the soil for farming or pastoral pursuits, the nature of the climate, the amount of rainfall, and the facilities for transport were described. The population as recorded at the Census of 1891 and of 1901 are given, as well as the area of land alienated by the Crown, the acreage under cultivation, and the number of live stock held and depastured in each division, practically comprising the whole of the colony under agricultural settlement, but exclusive of that larger area of country outside counties which is solely occupied for pastoral purposes.

The introduction of this system in 1890 has enabled useful and reliable information to be compiled and published as regards the comparative productiveness of an area of country exceeding 70,000 square miles in extent. Each division has its variety of soil, rainfall, and climate, and a season which may be favorable for one may be the reverse for another. Due recognition of this essential element in comparative results is afforded by the method on which the statistics are now collated.

I. The Central Division comprises all lands bounded on the north by a line of county boundaries from Port Wakefield to Morgan, and thence to the eastern boundary of the province; on the east by the River Murray, on the south by Encounter Bay, and on the west by the coast from Cape Jervis to Port Wakefield, together with Yorke Peninsula and Kangaroo Island. This division includes the counties of Adelaide, Gawler, Light, Albert, Alfred, Eyre, Sturt, Hindmarsh, Fergusson (Yorke Peninsula), and Carnarvon (Kangaroo Island). The

The country in this division, the earliest settled and most populous, consists of mountainous ranges (Mount Lofty 2,334ft.), hills, and plains of superior agricultural land. It includes the capital, and had a population of 207,549 at the date of the Census of 1891, and at the Census of 1901 of 241,229, showing an increase of 33,680 persons. The rivers Murray, Torrens, Onkaparinga, Gawler, Wakefield, and Light, and numerous minor watercourses attest the sufficiency of the water supply. The reservoirs in the neighborhood of the city have a storage capacity of 3,900,000,000 gallons. The climate is temperate, and the rainfall reliable, varying over a number of years from 42in. to 16in. on the hills and plains respectively, the average fall at Adelaide being 21in. yearly.

It embraces 13,891 square miles, or 8,890,240 acres, of which 3,192,201 acres have been alienated; 3,278,138 acres leased from the Crown, a total of 6,470,339 acres in occupation; 1,152,340 acres were in cultivation, of which 44,989 acres are orchards, gardens, vineyards, or orangeries. Sixty-nine thousand two hundred and forty-one horses, 78,864 cattle (of which 41,044 are milch cows), and 1,016,810 sheep are depastured within its boundaries.

This division lies between the sea-coast and the River Murray, and is so intersected by rail (308 miles) and road that the facilities for transit are excellent. The bulk of the arable land is situated within fifteen miles of a railway station or a shipping port.

II. The Lower North Division is bounded on the south by the Central Division, on the west by the coastline from below Wallaroo to a little north of Port Pirie, extending easterly to the boundary, and includes the counties Burra, Stanley, Daly, Victoria, Kimberley, Young, and Hamley. The population in 1891 was 50,484. At the Census of 1901 it had increased to 56,338, or by 5,854 persons. This division enjoys also a temperate climate, but with an earlier season by some weeks. There is a fair rainfall, averaging from 13in. to 25in., according to the level of the country. Two mountain ranges traverse it from south to north, with broad well-watered plains of exceptionally good arable land intervening. Some of the tableland is 1,500ft. to 2,000ft. above sea level. The greater part is very valuable sheep country, and farmers and graziers have increased their flocks considerably.

The total area of this division is 12,401 square miles, or 7,936,640 acres, of which 2,454,631 acres are alienated, 3,954,069 acres are Crown leases, the total area occupied being 6,408,700 acres: 980,536 acres are cultivated, and the live stock maintained thereon are 36,979 horses, 31,951 cattle (of which 13,145 are milch cows), and 1,065,432 sheep. Ports Pirie and Wallaroo, and 363 miles of railway throughout the district afford ample and cheap facilities for transport of produce. It possesses also the advantage of being the nearest agricultural land to the Broken Hill silver-mining district, with which it is connected by rail. The Wallaroo, Moonta, and Burra copper mines, and the Beetaloo and Bundaleer water reservoirs and systems, with a storage capacity of 856 million gallons, are situated in this division, also the Port Pirie and Wallaroo smelting works.

III. The Upper North Division includes all counties north of Port Pirie, and is bounded on the west by Spencer's Gulf as far as Port Augusta; thence northwards by the eastern shore of Lake Torrens, and includes the counties of Frome, Dalhousie, Herbert, Newcastle, Granville, Lytton, Blachford, Hanson, Derby, and Taunton. This division contains a large proportion of country popularly known as "beyond Goyder's line of rainfall," where the climate is hotter and drier, the average rainfall in the farming districts approximating 12in. to 15in. The storage reservoirs in this division have a capacity of 224 million gallons.

With the exception of counties Frome and Newcastle, through which the Flinders and Eastern ranges (Mount Brown 2,400ft.) run, the country chiefly consists of extensive plains with low rises and little surface water, and is subject to drought. Much of the country to the eastward is tableland considerably above sea level, namely, from 1,500ft. to 2,000ft., with a consequent lower temperature. The population in 1891 was 25,172, and in 1901, 24,967, or 475 less. The length of railways within this district is 369 miles, connecting with Port Augusta, Broken Hill, and the Transcontinental line to Port Darwin, open to Oodnadatta, 688 miles from Adelaide. The area within counties is 14,065 square miles, or 9,001,600 acres, of which 905,518 are alienated, 7,474,605 acres held under lease from the Crown, or 8,380,123 acres occupied, of which 841,036 acres are under cultivation. There are 24,719 horses, 28,569 cattle, and 470,263 sheep within this division.

IV. The South-Eastern Division comprises all country east of the River Murray as far as the boundary, and on the south is bounded by the Southern Ocean. It includes counties Russell, Cardwell, Buckingham, MacDonnell, Robe, Grey, Buccleuch, and Chandos. The climate is, of course, colder and the rainfall heavier than in any other part of the province (except Mount Lofty Range), viz., 20in. to 30in. The land is low-lying, with isolated hills or ridges, and a large portion of the surface is covered with water, but some thousands of acres have been reclaimed or improved by drainage works. The district possesses several shipping ports, and is united to the metropolis by rail, of which 362 miles are in operation. Its population in 1891 was 18,170, and at the last Census, 20,769, an increase of 2,599 persons.

The area within these counties is 15,660 square miles, or 10,022,400 acres, of which 1,344,009 acres are alienated, 4,063,931 are leased from the Crown, altogether 5,407,940 acres in occupation, of which only 97,784 are cultivated. The country being almost entirely devoted to grazing; nine-tenths of the alienated land is stocked with cattle or sheep—34,334 of the former (including 9,526 milch cows) and 1,489,250 of the latter, besides 16,382 horses. About 20,000 acres are laid down in English grasses for sheep-feeding.

V. The

V. The WESTERN DIVISION is confined to lands within counties adjacent to the west coast of Spencer's Gulf and that portion of the southern coast lying between Port Lincoln and Fowler's Bay. It includes the counties of Flinders, Jervois, Musgrave, Robinson, Way, Dufferin, Kintore, Manchester, Hopetoun, York, and Buxton, comprising 24,525 square miles, or 15,696,000 acres. It has an equable climate and an average coastal rainfall (20in.) In 1891, the population numbered 4,246, at the late census it had increased to 6,259. The land is principally used for sheep, of which 389,707 are kept. Horses number 8,110, and cattle 5,018; 176,364 acres are alienated, 6,209,406 acres leased from the CROWN, total 6,385,770 acres; 207,710 are under crop, cultivation and stock increasing. There are several good harbors, and steamship communication is maintained.

THE STATE.—Taking the five divisions as a whole, it may be said that agricultural settlement has not extended more than 100 miles from the coast. The extent and singular configuration of the shore line—especially that of Spencer's and St. Vincent's gulfs—reaching over 1,300 miles in length, with numerous well-sheltered ports, harbors, and shipping places, favors the economical transport of produce.

The River Murray, the longest river in Australia (1,300 miles), into which the River Darling discharges itself at Wentworth, flows through South Australian territory for 320 miles to its mouth, and for that distance is usually navigable throughout the year. Railways have been completed for 1,736 miles, and have been so designed as well to take the products of the several districts to the nearest port of shipment as to maintain the necessary inter-communication between all parts of the State. The total population at the census of 1901 was 358,508 persons (exclusive of the Northern Territory) as against 315,533, an increase of 42,975 persons.

No portion of the fifty-one millions of acres (of which thirty-three millions are occupied) embraced within the proclaimed counties, except in the Western District, is more than twenty-five miles from seaboard, railway, or river carriage.

AREA AND OCCUPATION.

The following statement shows the area of the State, also of the several divisions referred to, of the land wholly or conditionally alienated, of Crown leases, and of the total occupied:—

	Area.		Occupied.		
	Square Miles.	Acres.	Alienated.	Crown Leases.	Total.
			Acres.	Acres.	Acres.
I. CENTRAL DIVISION	13,891	8,890,240	3,192,201	3,278,138	6,470,339
II. LOWER NORTH	12,401	7,936,640	2,454,631	3,954,069	6,408,700
III. UPPER NORTH	14,065	9,001,600	905,518	7,474,605	8,380,123
IV. SOUTH-EASTERN	15,660	10,022,400	1,344,009	4,063,931	5,407,940
V. WESTERN	24,525	15,696,000	176,364	6,209,406	6,385,770
TOTAL COUNTIES	80,542	51,546,880	8,072,723	24,980,149	33,052,872
Remainder of State	299,528	191,697,920	1,091	59,293,984	59,295,075
TOTAL SOUTH AUSTRALIA	380,070	243,244,800	8,073,814	84,274,133	92,347,947
Northern Territory	523,620	335,116,800	473,195	186,749,480	187,222,675
GRAND TOTAL	903,690	578,361,600	8,547,009	271,023,613	279,570,622

South Australia, exclusive of the Northern Territory, has an area of 243,244,800 acres, of which 92,347,947 acres are in occupation, 8,073,814 acres have been alienated, and 84,274,133 acres are held under leases from the Crown, the remaining 150,896,853 acres being open for settlement.

Forty-six counties have been proclaimed, including the more closely settled portions, and representing 80,542 square miles, or 51,546,880 acres. Of the total area 8,072,723 acres have been wholly or conditionally alienated, of which 500,026 acres are held by selectors on the deferred payment system. Of the remaining 43,474,157 acres, more than half, 24,980,149 acres are held under direct lease from the Crown for agricultural or grazing purposes, or both combined.

Showing the extension of the leasing system for purposes of farming and grazing, instead of that of parting with the freehold, it will be noted that 20,479 leases have been granted, of which the area under right of purchase leases is 5,720,110 acres, under perpetual leases 6,399,672 acres, and under miscellaneous leases 4,615,856, making 16,735,638 acres, inclusive of 3,209 homestead blocks and leases, having an area of 47,859 acres. The area occupied for pastoral purposes only is 67,538,495 acres. The Renmark Irrigation Colony, together with the village settlements on the River Murray, cover 76,900 acres. The proportion of land occupied under Crown leases for settlement is nearly three to one held under freehold. The receipts from the sale of Crown lands, which in times past formed a considerable portion (for many years one-fourth) of the General Revenue, only average £39,252 per annum, mainly completions of purchase of land held on the deferred payment system. The receipts from Crown lands form 7 per cent. of the total revenue in South Australia, 15 per cent. in Queensland, and 21 per cent. in New South Wales.

Beyond

Beyond the limits of agricultural settlement, 105,529 square miles are held by 514 Crown lessees as sheep or cattle runs. The rental accruing was £37,068, as against £43,766 the year before.

When the system of credit selection was introduced in 1870, the sale by auction of land in fee simple was practically suspended. A further radical change was effected by the Crown Lands Act of 1888, which in its turn abolished credit selections on deferred payments, and substituted in lieu thereof a system of leasing the waste lands. Areas of land are now gazetted as open for lease with right of purchase or on perpetual lease. Small blocks in certain localities, presumably near centres of population, are also open for leasing by working men in lots not exceeding twenty acres, and upon similar tenure. In these cases personal residence of the lessee or a member of his family is required. Leases with right of purchase, which is exercisable after six years' tenure, are allotted for a term of twenty-one years, with right of renewal for a further like period. Land under perpetual leases will be re-valued by the land boards every fourteen years. The lands are classified and the rents and prices determined by these boards, but the right of purchase may not be exercised at a less price than 5s. per acre.

ENCLOSURE OF LAND.

Returns under this heading are not shown on this occasion, but the following is reproduced from the report for 1892-3 :—"It is rarely that land purchased from the Crown remains unenclosed, whilst it is a condition that areas leased (with or without right of purchase) for cultivation or grazing shall, within the first five years of the term of the lease, be enclosed with a fence capable of ordinarily resisting the trespass of great cattle, and be maintained in substantial repair. Probably the whole of the land alienated is now enclosed The difference between the area under cultivation and that which is fenced is, approximately, the acreage under native grasses, shrubs, or other pasture. Very large tracts of pastoral lands held under lease from the Crown are also enclosed with sheep-proof fencing.

"The following figures are, of course, approximate, but afford a means of comparison with former years :—The enclosed land is returned as 64,174,971 acres, as against 64,680,362 acres the year before; of the former 29,830,971 acres were within the boundaries of counties and 34,344,000 acres without, the latter representing lands enclosed for pastoral purposes only."

The quantity of fencing wire imported during the last ten years was 41,272 tons, value £378,892, and wire netting to the value of £312,096, so that a considerable area must have been protected in this manner.

RAINFALL.

The following table, supplied by the Government Astronomer, shows the rainfall (approximate mean) in each month over the whole of the agricultural districts of South Australia, together with the yearly rainfall at Adelaide, during the last ten years :—

Year.	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Total in Year.	Adelaide Observatory.

The above fairly represents the average rainfall over the whole of what may be termed agricultural or wheat-growing districts. In forming the table, Mount Lofty, where the rainfall is exceptionally heavy, and Port Augusta, where it is exceptionally light, have been excluded.

Sir Charles Todd observes—"We have to look, not so much at the quantity of rain which falls in any year—which may be swelled by summer storms—nor even at the mean annual rainfall, but at the general distribution of the rain, or the months in which rain may be looked for in sufficient quantities to adequately reward the labor expended in cultivating the soil."

He further remarks—"We cannot, as a rule, expect a good harvest without copious rains in the period May to October. The total rainfall for the year may, however, be comparatively small, and yet the harvest good (as in 1864, when it only averaged 18·83 inches, taking the whole of the agricultural districts), provided the rainfall is ample in the six months just specified. On the other hand, the total rainfall may be large, but the yield small, if the winter rainfall is deficient, or if heavy rains and adverse atmospheric conditions occur late in October, November, and December, as was the case in 1871, when the rainfall averaged 23·25 inches, and the yield was only 5 bush. 45lbs." The

The following tables hows the rainfall at certain selected stations throughout the farming districts, during the wheat-growing season, from April to September in the years 1898-9-1900, and the average fall over a series of years, for the same months. These particulars, especially prepared by the Government Meteorologist, are so instructive that this statement should be preserved for future reference :—

CULTIVATION.

Land under tillage in Australia aggregates 11,445,433 acres, showing an average of 3·0 acres per head of the population, compared with 2·8 acres in the year preceding. In proportion to population South Australia has the largest area under cultivation, 3,279,406 acres, forming nearly one-third of the whole acreage tilled in the six States, whilst the rate per head is three times the average of the whole, being 9·0 acres, as against 8·3 acres in the previous season. Victoria comes next with an average of 3·3 acres per head, the same as in the preceding season, the total area being 3,924,898 acres. New South Wales follows with an average of 2·4 acres, compared with 1·8 per head the year before, the total area being 3,279,122 acres. Tasmania, 254,791 acres, or 1·4 acres per head. Western Australia, 201,946 acres, or 1·1 acre per head; and Queensland, 505,270 acres, or one acre for each unit of the population.

South Australia—erstwhile the granary of Australia—has practically been built up by the production of cereals; for several years, however, the farmers have engaged largely in other branches of husbandry, devoting more attention to grazing, sheep-breeding, dairying, and kindred occupations, rendering themselves less and less dependent on wheat production. For example, up to the time of the drought many more cattle and sheep were kept on farms in the Lower and Upper North than there had been before the lands were thrown open to agricultural settlement, districts which ordinarily supply two-thirds of the whole wheat crop. Ten years ago the area cultivated within the counties was 2,649,098 acres, and the sheep kept 5,257,859; at present 3,279,406 acres are tilled, and 4,431,462 sheep depastured.

The following is a comparative statement of the area under cultivation and the number of sheep depasturing in each division in 1899-1900 and 1900-1, together with the increase or decrease :—

Division.	1899-1900.	1900-1.	Increase.	Decrease.	Per Cent.	
					Increase.	Decrease.

Sheep ..... number	1,488,046	1,489,250	1,204	—	0·08	—
WESTERN—						
Land cultivated ..... acres	189,730	207,710	17,980	—	9·48	—
Sheep ..... number	381,626	389,707	8,081	—	2·12	—
Total in Counties—						
Land cultivated ..... acres	3,081,846	3,279,406	197,560	—	6·41	—
Sheep ..... number	4,620,438	4,431,462	—	188,976	—	4·09
Outside Counties—						
Sheep ..... number	1,046,845	803,758	—	243,087	—	23·22
Total Sheep	5,667,283	5,235,220	—	432,063	—	7·62

The rainfall in each division was as follows, the figures in parentheses being those of the previous season :—Central, 17·86 (14·9); Lower North, 13·48 (12·24); Upper North, 8·71 (9·22); South-East, 19·96 (18·55); and Western, 14·73 (10·67) inches.

Farmers who were also sheep-breeders and graziers had profitable returns from the produce of their sheep, and it is satisfactory to note that their flocks and dairy herds have not materially decreased. The re-stocking of the pastoral districts, an increasing export of frozen lambs and dairy produce, and the satisfactory prices likely to continue for some time for live and dead stock, promise well for the future.

The population, exclusive of Northern Territory, shipping, and aborigines, in 1891 was 310,426, and at the census of 1901 had increased to 354,001, an addition of 43,575 persons, or 14 per cent. During the same period the area under cultivation has increased from 2,649,098 acres to 3,279,406 acres, an addition of 630,308 acres, or 24 per cent., as compared with an increase of 3 per cent. during the preceding decade, 1881-91. There are now 9·0 acres of tilled ground per head of this population, as compared with 8·4 acres at the date of the census of 1891. The following table shows

shows the area under cultivation in each division in South Australia at the date of the census of 1881, 1891, and 1901 respectively, and the increase or decrease, respectively.

Division.	1881.	1891.	1901.	Increase or Decrease.	
				1891 on 1881.	1901 on 1891.
	Acres.	Acres.	Acres.	Acres.	Acres.

AGRICULTURE.

One of the lessons taught by the late drought has been to impress upon farmers that, even in dry seasons, careful husbandry and the adoption of modern systems will ensure returns for their labor otherwise unobtainable. Utilising sheep in the stubbles and on the fallows, thereby clearing the land of wild oats and noxious weeds, is very general, as also is early sowing with the aid of the drill, depositing such chemical manures as are required by the soil to produce good and clean crops of superior grain. Ground so husbanded has yielded more than double the return in frequent instances, both of wheat and hay, and conduces to the fuller development of the staple products of the country, and consequently to the additional value of real estate. Not many years ago the use of artificial manures was, except to a few, unknown on farms; at present about 1,000,000 acres, or one-half of the entire crop, is so treated. Since 1897 the quantity of fertilisers imported has amounted to 53,286 tons, value £176,847; 25,405 tons, value £87,761, were introduced last season, compared with 10,690 tons, value £36,190 the year before, whilst the use of those locally made has also been largely augmented.

The season opened early with soaking rains, the fall being general and largely above the average. Afterwards rain in the Upper North was slight and intermittent, but over the rest of the State it was regular, frequent, and generally in excess of the average. The winter, exceptionally cold during the months April to September, was the best experienced for five years. In the Central and Southern agricultural districts more rain fell than in any year since 1893, the month of August having the highest record. Up to the close of September the rainfall had amounted to 19·51 inches. In October, however, only ·64 inches fell, one-third of the average, and hot winds setting in at this critical period the output in the Northern Districts was materially reduced, but, nevertheless, the yield of the harvest exceeded any gathered since 1893.

The total rainfall in the several divisions was as follows:—Central, 17·86, against 14·9 in the previous season; Lower North, 13·48 (12·24); Upper North, 8·71 (9·22); South-Eastern, 19·96 (18·55); and Western, 14·73, compared with 10·67 inches in the year preceding.

Nearly two-thirds of the whole area cultivated was under wheat for grain, five acres being sown for each individual of the population. The acreage under wheat was 1,913,247, as compared with 1,821,137 acres in the previous season, showing an addition of 92,110 acres. Owing to continued drought in the Upper North and some other districts the area harvested was only 1,574,017 acres, 339,230 acres not having been reaped; but some portion was cut for hay, the increased area of that crop being 29,890 acres.

The total quantity of wheat reaped amounted to 11,253,148 bushels, compared with 8,453,135 bushels the year before, and is the largest return since 1893, when the estimated produce was 13,618,062 bushels. The increase over the previous year's yield was 2,800,013 bushels.

The average yield on the area sown was 5·88 bushels, against 4·64 in the previous season—the accepted method of ascertaining the return for the labor employed—but as it was known that from causes here before mentioned an appreciable area was not harvested, special steps were taken to ascertain the acreage thereof in each district, and the total was found to be 339,230 acres, so that the average yield of the acreage reaped was 7·15 bushels. In the year 1867, when one-tenth of the crop was destroyed by red rust, a similar course was adopted, but the average yield of the State was officially recorded as on the area sown; as also in 1896, the first year of the drought, when 605,723 acres, or more than half, remained unreaped. Fortunately on these two occasions only has such procedure been necessary.

The following figures show for each division the average yield of the area sown and of the area reaped, viz.:—Central, 7·16 and 8·46 bushels; Lower North, 6·96 and 8·33; Upper North, 3·43 and 4·71; South-Eastern, 7·52 and 7·52; Western, 5·51 and 5·75; and for the State, 5·88 and 7·15 bushels respectively.

It is only too apparent that a large area of land has been taken up of late years for wheat-growing which has proved unsuitable, and that the area cropped in districts which have a low rainfall, say, under 14 inches, and where the soil is less productive than in more favored localities, the recurrence of bad seasons must be expected oftener than in districts where better results are almost certain with the larger rainfall.

Out of forty-six counties, twenty-one with a wheat area of 1,226,655 acres, or two-thirds of the whole cropped, and an average rainfall of from 14 to 29 inches, the total produce was 9,281,562 bushels, an average yield of 7·6 bushels on the acreage sown, and forming four-fifths of the quantity produced. The other twenty-five counties, having 686,582 acres, or one-third of the total average sown, and having an average rainfall of 5 to 13 inches, the total produce was 1,226,665 bushels, representing one-fifth of the crop, the average yield being only 2·9 bushels to the acre. It

It may be put that if the whole area of wheat sown had been grown within the twenty-one counties (inside Goyder's line of rainfall) the crop would have been 14½ millions instead of 11¼ millions, yielding an average of 7·63 bushels instead of 5·88 bushels, the actual return.

Under present conditions it can only be expected that the lower average production in this State compared with others must continue. Nevertheless Mr. Coghlan, the Statistician of New South Wales, writing in 1896, said :—"Owing to favorable conditions of culture a yield of 7 bushels in South Australia is financially as satisfactory as one of 15 bushels in New South Wales, or of 20 bushels in New Zealand."

The following statement shows the results of wheat-growing in South Australia during the last forty years :—

Season.	Wheat.			Mean Annual Rainfall (Adelaide).	Shipments Breadstuffs.		Average Price per Bushel (Pt. Adelaide).

Total 40 years	(49,926,592) *1,248,165	318,885,755	6·39	20·36	5,487,107	48,858,668	4 9

* Mean.

The above statement shows that during the past forty years the total number of acres of wheat sown was 49,926,592 acres, off which 318,885,755bush. were reaped, giving an average yield of 6·34bush. per acre. The average rainfall was 20·36in. The quantity of breadstuffs shipped during the same period was 5,487,107 tons,of the total value of £48,858,668, and the averge price of wheat at Port Adelaide 4s. 9d. per bushel.

The table affords the opportunity of comparing the results of the first twenty years (1861-1880) with those of the last (1881-1900), and of tracing some of the causes of decline in wheat-production during the latter period. During the first half 15,166,441 acres were sown, producing 130,690,165bush., averaging 8·62 to the acre, the average rainfall being 20·87in.; 2,195,423 tons of breadstuffs were exported, £24,752,588 value, the price of wheat averaging 5s. 7d. per bushel. In the next half 34,760,151 acres were sown, yielding 188,195,590bush., or 5·41bush. per acre, the average rainfall was 19·85in., and 3,291,684 tons of breadstuffs, value £24,106,080, were shipped, the price of wheat averaging 3s. 10d. per bushel. Similar particulars can be extracted showing the results in each quinquennial period.

Further information, not before published, will be found in an appendix to this report, giving for forty years the area sown, the produce, and the average yield per acre, also the rainfall over the agricultural areas in each division, and affords material for study to those interested in the progress of farming industry.

South Australia holds a position different from either of the neighboring colonies, as her hay supply is almost entirely derived from wheat cut before ripening, so that the conditions of supply and demand then existent generally determine whether the outcome shall be grain or fodder, consequently introducing a disturbing element into any forecast of the product of the cereal crops. The following figures show the combined area of wheat sown for grain and hay in the respective years:—

Acres.	1899-1900.	1900-01.	Increase.	Per Cent.	Decrease.	Per Cent.
Wheat	1,821,137	1,913,247	92,110	5·06	—	—
Hay	311,440	341,330	29,890	9 60	—	—
Total	2,132,577	2,254,577	122,000	5·73	—	—

It will be noted that last season the combined area under wheat and hay was 2,254,577 against 2,132,577 acres in 1899-1900, an increase of 122,000 acres. Of the total area sown 1,574,017 acres were reaped for grain and 341,330 acres were cut for fodder, leaving 339,230 acres unreaped owing to drought, principally in the Upper North division.

Practically the whole of the cereal crop is grown in the Central (593,735 acres), Lower North (549,208 acres), and Upper North (552,932 acres) divisions, the average ordinary rainfall being 21, 17, and 14 inches respectively. The fall this season was 18, 13, and 9 inches. In the Western division (175,388 acres) the rainfall was 15, and in the South-East (41,984 acres) 20 inches. The Upper North, which has only been under agricultural settlement for twenty-three years, embraces country north of Petersburg, and is beyond what is popularly known as Goyder's line of rainfall, at one time the supposed limit of cereal production. Notwithstanding the drought there are more acres of wheat sown in that division than before.

Fifty-five million bushels were reaped in the Upper North during the twenty years, 1876-1885, more than one-fourth of the entire production. The rainfall, although 6 to 7 inches below the mean at Adelaide, has been fairly consistent season for season. The subjoined particulars show for ten years (five prior to and five after the drought) the average yield for the Upper North and West Divisions (covering more than one-third of the whole wheat area), as compared with that of the whole of the agricultural districts, also the rainfall:—

	1884-5.	1889-90.	1890-91.	1891-2.	1892-3.	Average Five Years.	1896-7.	1897-8.	1898-9.	1899-1900	1900-1.	Average Five Years.

So important is the question often discussed whether wheat-growing is to be continued in the country known as beyond Goyder's line of rainfall, that, at the risk of repetition, the following table

table is presented. It shows the mean average yield and rainfall within and beyond that line, in periods of five years preceding the drought, and for the five subsequent seasons :—

		Mean of Five Years.				Year.

The severity of the drought throughout the colony, and how it affected various districts, can best be realised by comparing the results of the last ten years of which there are official records, as shown in the following table, relating to the area under wheat in each division, the gross produce, and average yield per acre, together with the rainfall over the agricultural districts :—

		Central.	Lower North.	Upper North.	South-Eastern.	Western.	Total.
Area ..... acres	1884-5.....	619,318	656,897	600,750	32,628	32,860	1,942,453

Adverse circumstances have not prevented the farmers carrying out the practice of summer fallowing to rest and cleanse the land, whilst the breaking up of new ground continues. The area returned as in fallow was 887,540 acres, compared with 822,013 acres—62,527 acres, or 7 per cent. additional. One acre in fallow to three acres in wheat is the proportion shown over a number of years, sufficient to prove the advantages attached to this mode of treating the soil.

Next in importance to wheat cultivation is the hay crop, which in this colony is chiefly the product of the cereal, mown when in the doughy stage, dried in the sun without further handling, and

and the sheaves stacked. The reaper and binder is almost universally used, and a large proportion of the crop disposed of to chaffcutters, and in ordinary seasons exported.

The area mown for hay was 341,330 acres, compared with 311,440, an increase of 29,890 acres on the preceding year; the quantity stacked was 353,662 tons, as against 229,800 tons, an increase of 123,862 tons, or 11 per cent. The average yield was 20·03 cwts., compared with 14·76 cwts. the year before. In ordinary seasons the cut averages one ton to the acre. The heavy losses in cattle and sheep which farmers have lately borne, partly owing to the absence of a reasonable reserve of cereal hay being kept on hand, have impressed upon them the necessity of holding, if possible, a year's supply in stock, in view of a recurring dry season.

Hay-growing chiefly centres in the following counties, the figures in parentheses being those of the previous season:—Adelaide, 53,372 (48,274) acres; Gawler, 32,978 (32,267) acres; Light, 39,877 (34,966) acres; Victoria, 35,970 (32,962) acres; Daly, 29,306 (21,838) acres; and Stanley, 24,850 (23,247) acres. Shipment of chaff to the neighboring colonies (mostly to Broken Hill) amounted to 9,185 tons, value £22,402, compared with 10,659 tons, £25,833 value, in 1899, whilst in the previous year hay and chaff to the value of £42,008 had been imported.

The cultivation of oats appears as an item of production on Yorke Peninsula 6,568 (5,087) acres, in County Gawler 2,770 (1,266) acres, and in several other parts of the cooler districts of the south. The acreage sown increased from 20,229 acres to 27,988, or 7,759 acres more; the area under crop has more than doubled in ten years. The average yield, which varies from 10 to 12 bushels, was this year 13 bushels, the total reaped being 366,229 bushels, against 218,331, or 12 bushels average the year before. The imports in 1900 amounted to 12,206 bushels, value £1,904 (against 39,540 bushels, value £4,059 in the previous year), the duty being 2s. per cental.

Barley, which is mainly grown in the Central (including Kangaroo Island and Yorke's Peninsula), the Lower North, and Southern Districts, and Port Lincoln, shows little increase in cultivation, although liberal inducements are made by brewers for the production of malting varieties. The area grown was 15,352, against 15,767 acres, or 415 less than the year before, and the produce 211,102 (188,917) bushels, or 22,185 bushels more; the yield being 13¾ bushels against 12 bushels—about the usual average. Its early maturity probably renders it less liable to the risks of the opening summer, whilst the yield, demand, and price being more stable than in the case of wheat, and the quality approved, greater advance may be expected. The duty on malt, increased in 1891 to 4s. 6d. per bushel, has not much affected the imported article, of which 34,378 bushels were introduced in 1900 (value £10,092), against 24,180 bushels (value £7,068) the year previous.

Field peas, mostly cultivated in the hilly country in the Counties Adelaide and Hindmarsh, where pig-rearing and bacon-curing are chiefly carried on, is a crop which, as a rule, gives a better return than wheat, and is well known for its recuperative action on exhausted soils. It appears to have stood the drought well, as the average of 1896-7 was 8·62 bushels, of 1897-8, 11 bushels, and of 1898-9, it was 15 bushels, in 1899-1900, 13·76 bushels, and this year 15·14 bushels, 14 bushels being the ordinary yield. The area under cultivation was 4,454, against 3,842 acres the previous year. This crop, grown in the midst of our largest dairying districts, seems to be a factor in the future expansion of the bacon industry. The imports of bacon, hams, &c., totalled 213,725lbs., value £6,219, against 273,705lbs., value £8,063 the year before—the duty being 4d. per pound.

Grasses which have been sown for pasture, chiefly by farmers and graziers in the South-East, cover 22,186, against 21,593 acres last year. Lucern is more widely distributed, although half of it is laid down in Counties Adelaide and Victoria, and occupies 10,127, against 11,356 acres, a decrease of 1,229 acres. During the past three years the area laid down has increased over 50 per cent. The augmented water service of the city and suburbs will doubtless add materially to the 2,206 acres of this green fodder (so essential to the summer milk supply), grown in the vicinity.

Subsidiary, mainly summer, crops show a considerable increase, 2,556 acres being returned, as compared with 1,520 the year before. Only field crops are given, including sorghum, 421; maize, 265; mangolds, 150; rape, 172; rye, 721; chicory, 107; onions, 566; and kail, 16; the latter six crops being chiefly grown in the South-East.

Potato cultivation shows a considerable falling off, the season in the South-East proving unfavorable, the area planted was 6,628, against 8,406 acres, or 1,778 acres less; and the quantity dug, 14,566 tons, or an average yield of 2·20 tons, as compared with 19,716 tons, or 2·35 tons to the acre in 1899, the deficiency being 5,150 tons. Prior to the drought the average yearly output was 22,000 tons, or a yield of 3·5 tons. Although the production chiefly centres in the South-Eastern division, where soil and climate are distinctly favorable to the growth of the tuber, about one-fourth of the total crop is grown in the Hills to the east and south of Adelaide. Around Mount Gambier and district 4,526 acres were planted, giving 8,170 tons, or 1·81 tons per acre, as compared with 6,328 acres, from which 13,387 tons were dug, yielding 2⅛ tons per acre in the previous year. In 1898 the area planted was 4,833 acres, the yield 8,405 tons, or 1·74 tons to the acre. Among the Hills the ground dug was 1,506 acres, off which 4,902 tons were taken, or 3·25 tons to the acre, against 1,362 acres, 4,624 tons—a return of 3·4 tons per acre. Imports, chiefly from Victoria, amounted in 1900 to 2,282 tons, value £6,894, and in 1899 to 5,152 tons, value £11,875, against 5,072 tons, valued at £36,513 the previous year. The duty is 20s. per ton.

Ensilage is a means of conserving fodder that can only be practicable when the green crops and herbage are fairly abundant. That occasion is taken when opportunity offers is shown that five years ago under normal conditions, 300 silos having a capacity of 9,248 tons were in use. During 1899 there were only 80 silos, with a capacity of 55,773 cubic feet, or 1,394 tons, as compared with 111 silos, 120,776 cubic feet, or 3,019 tons the previous year's storage. It is satisfactory to note that with a return to fair seasons the number has increased to 146, of 68,927 cubic feet, or 1,723 tons capacity.

HORTICULTURE.

HORTICULTURE.

Orchards and gardens have been so extended that the area now utilised amounts to 24,831 acres, an addition of 63 per cent. during the past ten years. The additional land devoted to horticulture has been almost entirely in the planting of orchards, which now occupy 16,001 acres, or nearly double more ground. Activity in horticultural operations is evidenced by the addition of 830 acres, the ground so worked having increased from 24,001 acres to 24,831 acres during the past twelve months.

The districts in which fruit culture is mainly carried on are the following, the figures within parentheses representing the previous season, viz. :—Counties—Adelaide, 12,120 (11,788); Light, 2,490 (2,008); Stanley, 1,306 (1,402); Hindmarsh, 1,010 (1,026); Frome, 1,028 (995); Victoria, 730 (650); Grey, 618 (638); and Hamley (Renmark), 1,360 (1,331) acres.

Orange trees have increased in number since 1892 from 63,631 to 109,490. The number of cases of oranges gathered was 40,073 against 36,990, or an increase of 3,083 cases. About one-tenth of the trees, having only been planted during the last four years, are not yet bearing.

Lemon trees were returned for the first time in 1898, and showed the unexpectedly large number of 54,124, being slightly over half that of orange trees. The return for 1901 gives 61,330 trees, or 2,508 less, but 17,548 against 13,975 cases gathered in the previous season. There is a large and increasing demand for this fruit, so essential to health in a warm climate, and it may be some years before we are independent of foreign supplies. Attention to the growth of this valuable fruit in quantity is only of recent years, so probably three-fourths of the trees are as yet unproductive.

Almond trees, for the growth of which the soil and climate are equally favorable, have chiefly been planted in gardens as an ornamental or shade tree, their commercial value not having received much attention. The trees are fairly productive, the nut is of good quality, and such limited quantity as is made available commands a ready sale. The number of trees is 152,405, as against 138,255, or 14,150 more than in the previous year, the produce being 3,773cwts., or 1,121cwts. increase.

Olive cultivation has for many years been carried on, the climatic conditions, nature of the soil, and the introduction of the best varieties all tending to the success of a highly remunerative industry in the production of fruit and oil of the best quality. The number of trees returned is 61,740, against 61,577, and the quantity of oil expressed 6,520galls., as against 4,865galls., or 1,655galls. more.

Fruit preserving, canning, and drying are important industries carried on under the most approved methods. The supply of locally dried raisins, currants, apples, apricots, peaches, and other fruits is insufficient for the demand, whilst the quality is generally excellent.

In 1900 the value of dried and preserved fruit imported amounted to £28,413, as against £28,504 in the previous year, whilst the exports amounted to £17,353 and £20,490, local products representing £7,694 and £5,021 in the respective years. The value of jams and preserves imported was £9,368, against £9,954, and exported £23,831, of which £16,245 were of domestic manufacture, and £18,035 and £10,063 in the previous year. Fresh fruit to the amount of £24,259 was received, as against £22,770, whilst the value exported was £46,961, of which £42,576 was of local growth, a considerable increase on the preceding year's transactions, when the figures were £36,405 and £32,842 respectively.

Bee-keeping is another industry which affords light employment to an extent not generally known, and is widely spreading where the climate and flora are favorable. Information respecting this pursuit was first obtained in 1891, when it was found that 500 tons were gathered; the next year, 200 tons; in 1896-7, 400 tons, from 17,553 hives; and in 1897-8 only 70 from 9,692 hives, so destructive was the season. In 1898-9 the conditions were more favorable, 14,081 hives were reported, an increase of 4,389; and the produce, 400 tons of honey (value £12,000), as against 70 in the previous year. The season 1899 was so unfavorable that the number of hives was reduced to 12,182, and the yield of honey to 238 tons, of £7,000 value; but the season 1900 was so propitious that the number of hives was doubled, 26,700 being returned, and 763 tons of honey, of £21,364 value.

South Australian wattle bark has always held a high place in the market for tanning materials. Until prices became greatly reduced some ten years ago, large quantities were stripped and exported. For a long period the industry has been depressed, but of late better values have induced greater activity, giving employment to numbers of strippers, and a welcome contribution to the farmers' income and to our staple exports. Plantations have been formed successfully, and more steam grinding mills have been erected, employing many hands. The quantity of bark stripped was 8,330 tons compared with 8,038 tons in the previous year, and 3,131 tons in 1892-3. The quantity exported in 1900 was 8,386 tons, value £63,732; in 1899, 8,953 tons, value £69,985, against 8,206 tons, value £62,132 in the previous year. During the decade, 1891-1900, shipments amounted to 60,166 tons (the value being £478,433), of which 21,586 tons (valued at £191,237) were exported during the first, and 38,580 tons (value £287,196) during the second five years of the period.

VITICULTURE.

Vine-planting has been so vigorously proceeded with during the past decade, that the area under vines has more than doubled. In 1891 there were 9,535 acres with 3,915,990 vines in bearing and 1,833,763 non-producing. In 1901 the area had increased to 20,158 acres, the number of productive vines to 9,207,935, and 1,215,908 vines not in bearing, aggregating over ten million vines. The

The following table gives the area and number of vines in the principal localities throughout which viticulture has so widely extended:—

County.	Year.	Acres.	Number of Vines.	
			In Bearing.	Not in Bearing.
Adelaide	1891	4,082	2,206,592	678,298
	1892	4,420	2,154,605	1,127,278

	1900	19,438	9,032,083	1,310,948
	1901	20,158	9,207,935	1,215,908

The total area under vines is 20,158 acres, against 19,438 acres, showing an additional 720 acres. The number of vines in bearing is 9,297,035 compared with 9,032,083, or an increase of 175,852; the number not yet productive being 1,215,908 against 1,310,948, or 95,040 decrease. The quantity of wine made from the vintage of 1900, inclusive of that made by winemakers as well as that by growers, was 1,558,285galls., compared with 1,342,960galls., an increase of 215,325galls. At the commencement of the decade the production of wines amounted to 1,048,170galls., increasing to 1,898,105galls., or nearly double in seven years. Grapes returned as sold, chiefly to wine-makers, amounted to 222,320cwts., as against 108,046cwts., an increase of 114,278cwts. Two tons of wine grapes or from three to five tons of table or raisin grapes is considered a fair average return.

The following statement shows for a period of ten years the quantity of wine made, in stock, and exported; also the number of stills and quantity of locally distilled spirits produced:—

Year of Vintage.	Wine Made.	Wine in Stock.	Wine Exported.	Value.	Number of Stills.	Spirits Made.	Duty Paid.
	Gallons.	Gallons.	Gallons.	£		Gallons.	£
1891	1,048,170	2,577,457	286,172	58,664	26	94,538	6,228
1892	795,631	2,578,070	325,038	64,780	36	109,239	6,410
1893	1,105,221	2,776,664	260,251	47,300	39	76,951	5,832
1894	1,158,900	2,908,320	256,216	49,475	36	98,718	7,096
1895	1,578,590	3,579,605	343,405	58,826	38	147,093	9,779
1896	1,743,099	3,713,381	391,233	73,316	38	128,376	12,628
1897	1,898,105	4,371,951	513,714	82,553	37	149,488	11,346
1898	1,263,998	3,717,008	514,065	78,381	38	94,045	11,195
1899	1,342,960	3,896,307	496,610	77,773	40	123,302	12,930
1900	1,558,285	3,521,637	476,646	78,153	57	122,214	13,807

In

In 1891 the wine reported in stock was 2,577,457galls.; it is now returned as 3,521,637galls., showing that since the commencement of the decade the quantity in the cellars has increased 37 per cent. The wine export has risen from 286,172galls. to 476,646galls., or 66 per cent. The recorded export value last year was £78,153, which gives an average of 3s. 3d. per gallon. The imports of foreign wines ten years ago were 21,230galls., value £16,626; last year they amounted to 22,541galls., £11,944 in value.

It is evident that the future of the vine industry must depend more and more on extraneous demand, especially from consumers in Great Britain. The consumption of Australian wine in the United Kingdom was in 1860 only 951galls.; in 1870, 36,147galls; in 1880, 55,000galls.; in 1890, 314,401galls.; and at the close of the century, 822,503galls. During the forty years the total consumption in the United Kingdom of wine of all countries increased from 7,358,192galls. to 15,888,069galls. The world's production of wine is 3,618 million gallons, of which 1,482 millions are produced in France.

In 1891 the quantity of locally-distilled spirit was 94,538galls.; last year 122,214galls. were made. The superior quality of the brandy produced here from the pure juice of the grape has secured the approval of the medical faculty at home and abroad. Considerable capital has been invested in the industry, and the latest appliances brought into use. The total quantity of spirits distilled during the ten years has been 1,143,964galls., upon which £97,251 duty was paid. The quantity locally distilled last year was 122,214galls., upon which £13,807 duty was collected. Whilst locally distilled spirits increased 95·30 per cent. those imported decreased 24 per cent. Foreign spirits entered for home consumption last year amounted to 127,204galls., the duty on which at 15s. per proof gallon reached £95,403; ten years before the quantity consumed was 157,568galls. The excise charge on locally-distilled spirits is 9s. 4d., and where solely used for fortifying wine, 6d. per gallon only.

Dried fruits, as before stated, show a supply far below the demand—especially so with raisins and currants. Seven years ago the output of raisins was 35 tons, in 1897 it rose to 354 tons, but, owing to drought, it declined in 1899 to 270 tons, rising this season to 408 tons. Currants have for many years been dried mostly for domestic use, but latterly in larger quantities for the open market; the first returns taken, in 1898, showed the total output as 44 tons; the last crop was 130 tons, showing the production to have trebled in four years. The quality of both these fruits is considered equal, if not superior, to those imported. The duty on raisins is 3d., and on currants 2d. per lb.; the imports of the former in 1900 being 112 (230) tons, and of the latter 564 (810) tons, of the values £3,684 (£8,471) and £17,606 (£12,508) respectively.

LIVE STOCK.

Horses were returned as numbering 166,790 compared with 168,695 in 1900, a decrease of 1,905, or 1·13 per cent. The number of working stock included in above was 120,323 against 121,571, a decrease of 1,248 only. The following statement gives the number of horses in each division in March, 1900 and 1901, and the increase or decrease respectively:—

Division.	1900.	1901.	Increase.		Decrease.	
			Number.	Per Cent.	Number.	Per Cent.
Central	65,544	69,241	3,697	5·64	—	—
Lower North	37,900	36,979	—	—	921	2·43
Upper North	27,455	24,719	—	—	2,736	9·97
South-Eastern	17,851	16,382	—	—	1,469	8·23
Western	7,775	8,110	335	4·31	—	—
Total of Counties	156,525	155,431	—	—	1,094	0·70
Remainder of State	12,170	11,359	—	—	811	6·66
Grand Total	168,695	166,790	—	—	1,905	1·13

The proportion of working horses to the total number is nearly three to one. The number crossing the border either way during the past ten years has been 7,774 inwards, and 10,118 outwards; last year 725 (1,056) horses were imported and 2,767 (1,137) exported.

Compared with the previous year there are but 214,761 head of cattle, as against 275,794, a decrease of 61,033, or 22·13 per cent. In the pastoral districts there are 36,025 head, against 88,142, a decrease of 52,117, or 59·13 per cent. In the counties there are 178,736, compared with 187,652 a year ago, or a decrease of 8,916, or 4·75 per cent.

Dairy herds show a large decrease, the number of milch cows being 75,942 against 83,527, or 7,585 or 8·11 per cent. less. They are distributed as follows:—Central division, 41,043 (44,028); Lower North, 13,145 (15,913); Upper North, 10,263 (10,775); South-East, 9,526 (10,500); Western, 1,439 (1,626); and 525 (685) outside of counties. The

The subjoined return gives the number of cattle depasturing within each division in 1900 and 1901, together with the increase or decrease :—

Division.	1900.	1901.	Increase.		Decrease.	
			Number.	Per Cent.	Number.	Per Cent.
Central	78,828	78,864	36	0.05	–	—
Lower North	36,529	31,951	—	—	4,578	12·53
Upper North	29,185	28,569	—	—	616	2·11
South-Eastern	37,666	34,334	—	—	3,332	8·85
Western	5,444	5,018	—	—	426	7·83
Total Counties	187,652	178,736	—	—	8,916	4·75
Remainder of State	88,142	36,025	—	—	52,117	59·13
Grand Total	275,794	214,761	—	—	61,033	22·13

In consequence of continued droughts throughout the northern pastoral districts the loss of cattle has been most severe, but probably some portion may be debited to previous years when musterings were impracticable.

In 1892 there existed 25 butter and cheese factories; now there are 64 working, described as 16 butter and cheese, 30 butter, 8 cheese, and 10 creameries. The returns show the number of milch cows, and the quantities of butter and cheese made in each district. The following figures will be acceptable to those engaged in this important and rapidly extending industry :—

Year.	Milch Cows.	Butter.			Cheese.		
		Made.	Exported.		Made	Exported.	
		lbs.	lbs.	£	lbs.	lbs.	£
1891	79,864	2,947,902	478,176	21,408	415,862	8,772	247

Total	—	—	8,698,799	350,217	—	241,361	5,657

* Statistics not taken. † Years of drought.

Fifty per cent. more butter was made in 1896 than in 1892. The actual quantity specified was 4,616,675lbs., as compared with 3,110,093lbs. The cheese made was 907,123lbs. against 661,314lbs., or 37 per cent. additional. In 1898 the quantity of butter made was 4,559,683lbs., and of cheese 923,123lbs., showing increases of 659,565lbs. and 73,278lbs. respectively. In 1899 the quantity of butter returned was 5,581,231lbs., the highest recorded and an increase of 1,021,548lbs., or 22 per cent. on the previous year. Of cheese the output increased to 946,930lbs., or 3 per cent. additional. Owing to the drought, only 605,301lbs. of butter, value £26,194, were exported in 1896, and in 1897 but 166,213lbs., value £6,879, from the same cause. In 1898, however, 769,393lbs., value £28,007, were shipped. In 1899 the quantity of butter exported was 1,402,261lbs., an increase of 80 per cent., and of the value of £61,473, showing 120 per cent. more. In 1900 shipments were 1,143,473lbs., representing £51,173 in value. The total export of South Australian butter during the last ten years has amounted to 8,698,799lbs., of £350,317 value. During the last five years the production of cheese has risen from 907,123lbs to 1,030,680lbs., nearly all locally consumed.

The total number of cattle imported overland was 7,000, against 2,896 exported, leaving a net import of only 4,104 head against 18,802 in the previous year, owing to drought. During the last ten years 163,207 head have been imported, chiefly fat stock from Queensland, an average of 16,320 head per annum. The subjoined table shows the movement of stock across the border during the last decade :—

Year.	Sheep.		Cattle.		Horses.	
	Imported.	Exported.	Imported.	Exported.	Imported.	Exported.
1891	276,484	107,233	18,280	2,081	1,320	1,342
1892	172,089	100,319	19,062	3,270	677	766
1893	230,973	89,104	16,202	322	321	720
1894	290,071	98,545	16,292	358	649	807
1895	285,785	96,906	8,043	292	489	473
1896	110,901	89,333	20,615	2,167	879	841
1897	146,878	59,275	14,150	238	875	421
1898	288,783	63,894	23,535	1,801	783	844
1899	258,950	49,652	20,028	1,226	1,056	1,137
1900	73,409	191,170	7,000	2,896	725	2,767
Total	2,134,323	945,431	163,207	14,651	7,774	10,118

Last

Last year only 73,409 sheep were imported, and 191,170 exported, the first occasion when the departures exceeded the arrivals, the usual Queensland supply being cut off. During the ten years 2,134,323 sheep were introduced, as compared with 945,431 crossed the border outwards, showing an addition of 1,188,892, from which it appears that within the period that number of sheep and 148,556 head of cattle have been required for food consumption beyond the local sources of supply.

Five-sixths of the sheep are depastured within the boundaries of counties, and the remainder in the outside pastoral districts, in which case they are owned by sheepfarmers under the leasing clauses of the Crown Lands Acts. In the former instance the sheep are kept on purchased estates, on freehold or leasehold farms, together with a considerable area of country held under miscellaneous leases from the Crown for farming and grazing,or both pursuits combined.

At the date of the census of 1891 the number of sheep in the State was 7,004,642. In the following year, 1892, they had increased to 7,646,239, or by 641,597, or 9·2 per cent.; but next year, 1893, the number receded to 7,152,047, or 6·5 per cent. During the three years following, and in which interval no statistics were taken, we find that the flocks decreased by 828,954, or 11·2 per cent., the number returned in 1897 being 6,323,993 only. In 1898 they were further reduced in number to 5,032,541, a loss of 1,291,452, or one-fourth, owing to drought. In 1899 the trouble seems to have received a decided check, as, although there was no increase, the total was nearly the same, 5,012,620, or but 0·38 per cent. less. In 1900 the total number of sheep returned was 5,667,283, showing an increase of 654,663, or 13·06 per cent. additional. In 1901, the number was reduced to 5,235,220, a loss of 432,063, or 7·62 per cent., owing to continued drought in the pastoral districts.

Upon pastoral country outside counties only 803,758 sheep are now kept, against 1,746,783 ten years since, showing a decrease of 117 per cent. Within the boundaries of the several counties where sheep are mainly run on freehold estates, or on farms, or grazing leases, the losses, although severe, have not been so great, the flocks numbering 4,431,462, as compared with 5,556,194 ten years ago, showing a loss of 1,124,732, or 25 per cent., including the period of drought.

With regard to flocks kept by farmers, graziers, and large landholders the total returned is 4,431,462 as compared with 4,620,438 last year, being a decrease of 188,976, or 4·09 per cent. The Central division carried 1,016,810 against 992,357, showing an increase of 24,453, or 2·46 per cent. The Lower North, 1,065,432 compared with 1,088,263, shows a reduction of 22,831, or 2·10 per cent. The Upper North shows a return of 470,263, against 670,146, or 29·83 per cent. less. The South-East returns 1,489,250 against 1,488,046. There has been little change in the number of the flocks in this division during the last ten years. The Western district in 1891 carried 652,215, and last season 389,707, an increase of 8,081, or 2·12 per cent. on the previous year.

The following table shows the total number of sheep in each division of the State in the month of March in the years 1900 and 1901, and the increase or decrease :—

Division.	1900.	1901.	Increase.		Decrease.	
			Number.	Per Cent.	Number.	Per Cent.
Central	992,357	1,016,810	24,453	2·46	—	—
Lower North	1,088,263	1,065,432	—	—	22,831	2·10
Upper North	670,146	470,263	—	—	199,883	29·83
South-Eastern	1,488,046	1,489,250	1,204	0·08	—	—

Remainder of State	1,046,845	803,758	—	—	243,087	23·22
Grand Total	5,667,283	5,235,220	—	—	432,063	7·62

The statement of wool exported affords a means of checking the returns of sheep, if gauged by the weight shipped, and not by the number of bales or the estimated contents in fleeces, which are apt to mislead, varying with the seasons. A comparison of the figures given in the next table shows that year by year there is a fair agreement between the two. It shows for the last ten years the number of sheep, the number of pounds of wool exported, the average per sheep, the declared value and rate per pound at Port, and also the London price of average Adelaide greasy wool at October sales. The rainfall for each season is also given.

Year.	Rainfall (Adelaide).	Sheep.	S.A. Wool Exported.		Value Declared at Port.		London Sales' Prices (Average Greasy).
			Total.	Per Sheep.	Total.	Per Pound.

* Estimated; no returns taken.

During

During the decade, 1891-1900, the average number of sheep depastured was 6,381,994, the average for the first half was 7,309,657, and for the second 5,454,331. The exports of wool for the whole period were 437,996,234lbs., of which 248,487,517lbs. were shipped in the first half—a yearly average of 49,697,503lbs.; in the second half 189,508,717lbs., or an average of 37,901,743lbs. The total value of the wool was £12,780,106, of which £7,095,049 was obtained in the first, and £5,685,657 in the second period, the average yearly value being £1,419,010 and £1,137,011 respectively. The average London price of South Australian greasy was for the decade 7·37d.—for the first five years 6·35d, and 8·41d. for the last quinquennial period.

At the commencement of the decade the Adelaide rainfall was 14 inches, the number of sheep 7,646,239, export of wool 51,561,485lbs. (or 6·74lbs. per fleece), and the London price 7d. per pound. In 1896 the rainfall was 15·17 inches, the number of sheep 6,323,993, export of wool 47,042,861lbs. (or 7·44lbs. per sheep), and the London price 7¼d. per pound. At the close of the term, 1900, the rainfall was 21·68 inches, the number of sheep 5,235,220, the shipment of wool 33,277,660lbs. (or 6·36lbs. per fleece), and the London price 7½d. per pound, average greasy. In the preceding season 37,386,313lbs. were exported (or 6·60lbs. per sheep), and the London price was inflated to 12d. per lb. for a short period.

South Australian wool, in 99,046 bales, containing 33,277,660lbs., and valued at £1,003,391 was exported in 1900. In the previous year 111,450 bales were shipped, contents 37,386,313lbs., of £1,511,693 value. The decrease in shipments was 12,404 bales, 4,108,653lbs. weight, and £508,302 in value.

The quantity of wool exported is generally taken to mean the produce of the clip, but as no account of the weight of wool on the sheepskins, now shipped in considerable numbers, is recorded in the wool shipments, the aggregate production is by so much understated. During the last ten years 143,025 packages of South Australian sheepskins, to the declared value of £1,703,227, were exported. The average shipment for the first five years was 13,890 packages, value £158,024, and 14,715 packages, value £182,622 during the last.

In the same decade the wool-washing industry, formerly of considerable importance, has materially declined. The exports of scoured wool for the ten years amounted to 43,880,587lbs., of £2,121,693 value. The shipments during the first half reached 26,295,100lbs., averaging 5,239,020lbs., of £248,031 value, and in the last half were 17,585,487lbs., or an average of 3,517,097lbs., value £169,108 annually. The exports in 1899 amounted to 2,823,523lbs., value £166,640, and in 1900 to 2,735,835lbs. of £167,063 value.

Considerable quantities of wool arrive by rail and river from the adjoining states for shipment at South Australian ports, amounting in 1900 to 30,805 bales, containing 11,014,562lbs., valued at £330,457. In the preceding year 37,092 bales, weighing 13,098,714lbs., value £393,443.

The total shipments of wool in 1900 were 124,885 bales, weighing 42,058,431lbs., of £1,312,008 total value. In the previous year the exports amounted to 143,582 bales, contents 48,166,812lbs., and £1,889,905 value. The decrease was 18,697 bales, weight 6,108,381lbs., and £577,897 in value.

Twenty years since the number of pigs was 90,548, when, stimulated by the introduction of a valuable strain of Berkshire stock, pig-breeding assumed such proportions that in five years the number had increased to 161,907—then declined to 106,856 in 1889, and further to 60,132 in 1898. More attention has been shown to this class of stock during the past few years, the number having increased to 89,734, or by 29,602, being an addition of 50 per cent, chiefly in the dairying districts.

In connection with this industry attention may be drawn to the remarkable increase in the local salt production. For curing purposes and domestic use this commodity, so excellent in quality, has practically excluded foreign imports. Ten years ago 1,247 tons were imported, at present only 201 tons. In 1891, the exports of South Australian salt amounted to 7,507 tons, in 1900 they reached 33,425 tons, of £37,236 value; of this New South Wales took 20,463 tons, New Zealand 4,851 tons, Queensland 2,738, Victoria 2,801, and 1,508 to Tasmania. The total shipment for the ten years was 193,361 tons, of £237,111 value. During the first half of the decade the exports amounted to 46,305 tons,; during the last half to 147,056 tons, the value being £57,547 and £179,564 respectively. This industry, chiefly carried on at the salt lakes on Yorke Peninsula, is of great importance to the farming residents, who therein find regular employment in the off season, and is capable of large extension.

The number of goats is returned as 8,945 (increase 1,546), of which 3,396 are kept in the outlying pastoral districts, the remainder being distributed in small numbers in suburban localities. It is to be regretted that the fine flocks of Angora goats, the progeny of a few of pure breed introduced from the Cape many years since, and which had augmented to 802 in 1893, have become dispersed.

The number of stock other than those specified includes 1,047 camels, 414 donkeys, 177 mules, 1,186 ostriches, and 60 deer, compared with 856 camels, 884 donkeys, 234 mules, 705 ostriches, and 100 deer, in the previous year.

Few are aware of the large extent to which eggs are exported, the returns with regard to poultry are therefore of interest. Ten years ago the number of all kinds was 1,089,702, with an export of eggs of £48,554 value; in 1900 the number returned was 1,348,462, and the shipments were valued at £73,679; the total for the ten years being £435,132, or £84,915 more than the value

value of butter exported during the same period. Last year the value shipped was £73,679 against £62,493; to Western Australia, £56,604 (£49,374), and £15,679 (£12,573) to Broken Hill, New South Wales.

Copies of this Report and Appendices will, as customary, be forwarded to the statistical departments of other Governments which exchange publications and to the several corporations, district councils, and agricultural bureaus throughout the province.

I have the honor to be, Sir,

Your obedient servant,

L. H. SHOLL, Under Secretary and Government Statist.

APPENDIX.

TABLE showing the AREA of LAND under WHEAT SOWN for GRAIN, the PRODUCE in BUSHELS, the AVERAGE YIELD per ACRE, and the AVERAGE RAINFALL over the AGRICULTURAL AREAS in each DIVISION of the STATE of SOUTH AUSTRALIA, 1861–2, 1900–1.
